DETAILED ACTION

1. This Office Action responds to the Application filed on 1/31/2002, drawings filed on 5/21/2002, IDS filed on 10/23/2003, and interview conducted on 12/12/2003.

Claims 1-14 are pending. Claims 1-14 have been examined and are allowed, wherein claims 1 and 7 are subjected to the following Examiner's Amendment.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

As per **claim 1**, "the second" (line 7) has been replaced with --a second--.

As per **claim 7**, "the technology" (line 4) has been replaced with --a technology--.

Allowable Subject Matter

3. **Claims 1-14** are allowed.

4. The following is an examiner's statement of reasons for allowance:

As per **claims 1-14**, the independent claim 1, which the claims depend, recites the method for performing technology mapping, comprising the inventive steps/means of mapping the design to the technology and optimizing the design for the technology in which the selected candidate sub-network is replaced with the replacement sub-network, wherein the replacement sub-network is identified from a storage that stores replacement sub-networks that are bound to a second technology, as claimed, which

Art Unit: 2825

replacement sub-networks that are bound to a second technology, as claimed, which the prior arts made of record failed to teach or suggest. In particular, the various prior arts made of record teach various methods/systems for mapping/synthesizing the circuit from a technology independent or high level description (i.e., not bounded to a particular technology) to a specific technology, including performing iterative mapping and optimization and translation into various desired technologies (see especially **Markovic et al.**, "FPGA to ASIC Conversion Design Methodology with the Support for Fast Retargeting to Different CMOS Implementation Technologies", Proceedings of 2000 22nd International Conference on Microelectronics", Vol. 2, 14 May 2000, pp. 703-706, especially Figure 2 and section III; **Kim et al.**, US Patent Application Publication No. US 2002/0178432 A1, especially paragraph [0009]; **Besson**, US Patent Application Publication No. US 2002/0157063 A1, especially paragraphs [00011], [0025], [0037]; **Iyer et al.**, US Patent No. 6,446,240, especially abstract; col. 4, lines 14-39; col. 5, lines 13-30; col. 8, lines 46-60; col. 9, lines 48-67; **Belkhale et al.**, US Patent No. 6,023,566, especially col. 1, line 47 to col. 2, line 27; col. 2, line 53 to col. 3, line 27; col. 4, lines 13-22; col. 4, line 66 to col. 5, line 10; **Tokunoh et al.**, US Patent No. 5,892,678, especially col. 10, line 38 to col. 11, line 8). However, none of the prior arts made of record teach or suggest the inventive steps/means as claimed. Accordingly, the claimed invention is novel and un-obvious over the prior arts made of record.

Conclusion

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2825
